

PartsPlus
PROACTIVE
Replacement Part Programs

TRANSFORM **REACTIVE** MAINTENANCE INTO **PROACTIVE** CONTROL

To maintain maximum performance in your packaging equipment and avoid costly downtime, replacing worn parts in a timely manner is critical. That's precisely why Douglas designed the **PartsPlus** program to proactively deliver the right parts at the right time – keeping your machine running at optimum efficiency while minimizing unplanned interruptions to your production schedules.

With PartsPlus, our Replacement Parts Specialists carefully review the history of your machine and recommend the appropriate kits. Each kit includes a customized floor plan of your machine to easily identify machine sections and areas of worn parts. Field modification experts will recommend machine enhancements and any additional improvements you may benefit from upon request.

If you choose to have Douglas install and test your new parts, our skilled Service Technicians are ready to assist on a timeline determined by your schedule.

Ready to get proactive with **more** convenience, performance and efficiency? Let's talk.

Turn your reactive maintenance into proactive control today. Contact Douglas Technical Support or your Replacement Parts Specialist to learn more!
